Task Description: Project 1 – Personal Web Page

Theme: Movie Fan Page

Create a personal webpage dedicated to your favorite movies. The goal is to practice using fundamental HTML elements and simple CSS formatting by creating a unique version of the webpage example we created together in class. Follow the guidelines below to ensure your project meets the requirements.

Guidelines

1. **Title and Header:**
   - Include a unique title and header introducing your favorite movies.
2. **About Me Section:**
   - Write a paragraph about your interest in movies.
3. **Genres Section:**
   - Create an unordered list of your favorite movie genres.
4. **Top Movies Section:**
   - Add a table listing at least three favorite movies, with columns for the title, director, and year.
5. **Recently Watched Section:**
   - Include an ordered list of three movies you've watched recently.
6. **Fun Quotes Section:**
   - Use the `<pre>` tag to display memorable quotes from your favorite movies.
7. **Glossary Section:**
   - Add a description list explaining movie-related terms (e.g., "Director," "Cinematography").
8. **Footer Section:**
   - Include an email link, an external hyperlink to a movie-related website (e.g., IMDb), and a relevant image (e.g., a movie reel or poster).
9. **HTML Formatting:**
   - Use formatting tags like `<b>`, `<i>`, `<u>`, `<mark>`, `<small>`, `<del>`, `<ins>`, `<sub>`, and `<sup>`.
10. **CSS Formatting:**
    - Apply basic styling using only colors, background colors, and list/table styling (no margins, padding, or advanced features).
11. **Clickable Images:**
    - Add an image link for at least one movie poster that redirects to a related page (e.g., IMDb).
12. **Hover Effects:**
    - Add hover effects for links and/or images to improve interactivity.
13. **Anchor Links:**
    - Add at least one internal anchor link to navigate between sections (e.g., "Go to Glossary" or "Back to Top").

Additional Features

To learn independently, include the following features in your project:

1. **Embed a Video:**
   o   Add a movie trailer or clip using the `<iframe>` tag.
2. **Text Alignment:**
   o   Use the `text-align` property in CSS to align text (e.g., center-align the header).
3. **Tooltip for Links:**
   o   Add a hyperlink with a tooltip using the `title` attribute.
4. **Font Customization:**
   o   Use the `font-family` CSS property to apply a specific font to your page.
